TelOSINT

A program that detects and gathers info about every phone number found in .pdf or .txt file AND saves google search results about a phone number automatically.

Instructions

- Firstly, double-click on the "Create_shortcuts_for_TelOsint.exe" program which creates the necessary shortcuts to the "TelOsint shortcuts" folder.
- Then, double-click on the "telosint.exe" file in the "TelOsint shortcuts" folder to run the app.

Usage

- Click on the first Button to select a .pdf or .txt file to extract ALL the phone numbers' info from it (for every existing phone number in the file).
    - This action adds every phone number found along with the info to phoneinfo_telosint.csv file (find it in the "TelOsint shortcuts"-open it with Excel or Libre office).
    - In addition, it creates a map in the folder maps (you will find the shortcut in the "TelOsint shortcuts")
- Before clicking on the second Button for saving google search info you must first **necessarily** type in the phone number in INTERNATIONAL FORMAT (e.g., **+35**1234567890) and then the number (quantity) of the URLs you want to save for the number (extracted from google search in descending order).
    - If everything done successfully, the URLs for each number will be found in the corresponding excel file in the "num_google_search" folder in the "TelOsint shortcuts.

Tips

- If you have the phone nums you wanna get info from in an excel/csv file copy the column in a text file (.txt) and then select this with the program's first function. Same thing if you want to enter numbers you know: Just type them in a .txt file.
- Use the info from the maps to search in online google maps info related to that region.
- If the second program's function doesn't work is probably due to many http requests to google and block because of this. Wait before search again (usually you must wait for one hour SORRY).
